CUSTOM MADE-SPONGES

Ess-Ma's Custom made sponges are the result of the company's 3D design and modern production technology. For customers, Custom Made sponges offer diverse alternatives for different uses.

The sponges are formed individually, according to the customer's wishes, while the sizes of the sponges and their number in the packaging is tailored to the needs of the customer. Since we are also a raw material manufacturer, we are able to implement an extensive range of solutions and deliver even large quantities at competitive prices.

There are different material alternatives, forms and printing technology solutions available for the packaging labels. It is also possible to print a QR code for the packaging to provide consumers with more information about, for example, the product or the company that sells it.

Our modern, technologically advanced production enables even large orders with a fast delivery time. Ess-Ma arranges freight flexibly on behalf of the customer. Orders are delivered either as separate batches or at the onetime to the delivery address indicated by the customer. The storage compartment is facilitated by adjustable pallet heights.
